Bourns® Model SRF1260A and SRF1280A Series Dual-Winding Shielded Power Inductors

Manufacturing Process Changes

Riverside, CA – October 31, 2019 – Bourns is making several changes to the manufacturing process of the Model [SRF1260A](#) and [SRF1280A](#) Series Dual-Winding Shielded Power Inductors to move from a manual process to either a semi-automated, automated or a combined process. These changes will improve production efficiency, and the automation is expected to improve product quality and reliability. A list of affected part numbers is on the following page.

Existing Manufacturing Process	Revised Manufacturing Process
<ol style="list-style-type: none"> 1. Core gluing - Manual 2. Pin bending - Manual 3. Gluing on inductor surface – Manual 4. Marking, testing, packaging – Separate individual processes 	<ol style="list-style-type: none"> 1. Stencil printing / gluing – Automated 2. Pin bending – Semi-automated 3. Stencil printing / gluing on inductor surface – Automated 4. Marking, testing, packaging – Integrated to a single process

The form, fit and function of these inductors will not change. The quality and reliability is expected to improve as the result of the automation of the manufacturing process. Samples for evaluation are available upon request.

Implementation dates are as follows:

Date that manufacturing of existing products will cease: **June 20, 2020**

Date that deliveries of modified products will begin: **June 21, 2020**

First date code using the above changes: **2026**

If you have any questions or need additional information, please feel free to contact [Customer Service/Inside Sales](#).

Users should verify that the described changes will not impact the performance of the product in their specific applications.
