Bourns® Model 39 Panel Control Goes Lead Free

Bourns Sensors & Controls Division strives to keep our products updated to the latest industry standards. The latest electronics industry trend is to remove hazardous materials from electronic components.

Bourns® [Model 39](#) 13 mm Panel Control has undergone redesign and is now a “lead free” product in compliance with European Directive 2002/95/EC on the restriction of the use of certain hazardous substances (RoHS) in electrical and electronic equipment.

This panel control is available with momentary push switch or rotary switch options. The rugged metal housing and long rotational life make this product ideal for industrial applications.

Samples of this new lead free product are now available. For your convenience, the distributor price list is attached. The updated data sheet is also now available on the Bourns website at www.bourns.com.
