Bourns® Networks Product Line Introduces Tighter Standard Tolerance for Thick Film Resistor Networks

Bourns announces the addition of 0.5% and 1% as standard resistance tolerances for selected models of thick film resistor networks. Previously, both 0.5% and 1% were optional.

The “How to Order” section of the data sheets for the models listed below have been revised to show 0.5% and 1.0% selections of tolerance for the resistance range of 100 ohms through 1 Megohm. The inclusion of these tighter tolerance options in the “How to Order” section will help customers to identify Bourns’ capability to provide tighter tolerances.

The models are:

4100R	4300R
4400P	4300M
4800P	4300H

Lead-time for the 0.5% and 1.0% resistor networks is the same as the delivery for 2.0% products.
