ENCODERS

April, 2016

Manufacturing Process Change from Ink Marking to Laser Marking Model EPS and ES Encoders

The marking on the Bourns® [Model EPS Digital Contacting Encoders with Momentary Switch Option](#) and [ES Shaftless Contacting Encoders](#) will change from an ink marking to a laser marking. The laser marking will help improve manufacturability and reduce material costs.

The laser marking process will have no impact on the fit, function, quality or reliability of the products. The only change to form is the appearance of the marking. Products with the laser marking are available now upon request.
