

Product Obsolescence Memo

CO & OUTSIDE PLANT PRODUCTS

November, 2012

Model 2380-27-01 to be Discontinued

Bourns Outside Plant Product Line will be discontinuing [Model 2380-27-01](#), a J130S Solid State Station Protector. A lack of sales volume and diminishing demand necessitates this action.

The replacement model is [Model 2378-35-HS](#), a 155HS Digi.Guard II MSP® Heavy Duty Station Protector. The Model 2378-35-HS offers superior performance and service life. The replacement part number has the same function and the industry code is 155. The form uses an industry standard 1xx footprint station protector.

The replacement part (2378-35-HS) combines Metal Oxide Varistors (MOVs) for quick response with a Gas Discharge Tube (GDT) for high surge energy handling. It also has an improved Fail-Short mechanism for fire safety. Accordingly, the replacement part has the same function as the obsolete part, but the performance and surge life offer an improvement over the obsolete part. The MOV gives the speed; the GDT gives the high energy handling. The form and fit of the replacement part are different than the obsolete part.

Please plan for the following deadlines:

*Last Time Buy Date: **December 31, 2012***

*Last Time Ship Date: **January 31, 2013***

Should you have any questions or need additional information, please feel free to contact [Customer Service/ Inside Sales](#).
